

Dear FCC, I am in support of the new rule making petition submitted by the American Radio Relay League, which will bring more amateur radio operators into the amateur radio community, this very important because amateur radio operators help out during disasters, I volunteer with the emergency management office and the national weather service as a skywarn spotter, I know some people are angry about the removal of the morse code requirements, but most amateur radio operators use AMTOR, RTTY, or PACKET modes which are better modes of communication during emergency message traffic, with the use of low power. I am in full support of ARRL's decision on this issue. I have read through the proposal and it seems to be the better structured proposal on restructuring plans of the amateur radio license requirements.
